Notes

Semantic HTML Basics

Concepts

Semantic HTML means using tags that **clearly describe the purpose of the content inside them**.

Instead of using generic tags like `<div>`, semantic tags give **meaning and structure** to your webpage.

Why it matters:

- Browsers understand layout better
- Developers read code easily

- Search engines index content properly
-

◆ Core Semantic Tags

These tags define the **main layout of a webpage**:

- `header` → Represents the **top section** (logo, navigation, headings)
- `footer` → Represents the **bottom section** (copyright, links, contact)
- `main` → Contains the **main content of the page** (used only once)

👉 These tags help divide your page into clear sections.

🧱 Page Structure

Semantic tags help in building a **well-structured layout**:

- `section` → Groups related content together
- `article` → Represents independent content (blog, news, post)

👉 Difference:

- `section` → grouping content
 - `article` → standalone content
-

📖 Content Grouping

- `aside` → Used for **side content** like sidebar, ads, related links

👉 Example:

- Blog + sidebar = `article` + `aside`
-

▼ Interactive Tags

These tags improve **user interaction**:

- `details` → Creates collapsible content (hidden by default)
- `summary` → Visible heading for `<details>`

👉 Example:

```
<details>
<summary>Click to view more</summary>
<p>Hidden content here</p>
</details>
```

💻 Basic Layout Example

```
<header>Header Content</header>

<main>
<section>
<article>Blog Content</article>
</section>

<aside>Sidebar</aside>
</main>

<footer>Footer Content</footer>
```

🔍 SEO Benefits

- Helps search engines understand content structure
- Improves indexing and ranking
- Creates clear content hierarchy

👉 Result: Better visibility on Google

♿ Accessibility (a11y)

- Helps screen readers understand layout
- Improves usability for visually impaired users
- Makes websites more inclusive

👨‍💻 Code Structure Benefits

- Cleaner and more readable code
 - Easier to maintain and scale
 - Better for team collaboration
-

Summary

- Semantic tags describe **meaning of content**
 - Replace unnecessary `<div>` usage
 - Improve SEO, accessibility, and readability
 - Help create structured and scalable layouts
-

Best Practices

- Avoid overusing `<div>`
 - Use correct semantic tag for each section
 - Maintain proper structure hierarchy
 - Combine with proper heading tags (`h1–h6`)
-

Pro Tip

If the tag name clearly describes the content inside, you're using semantic HTML correctly.
